Mohammed Jinna's Introduction - AI Automation for MES Group

39 messages

Taha Sheikh <tahasheikh111.ts@gmail.com>

Mon, May 4, 2026 at 3:02 PM

To: raman@mesgroup.com.sg

Cc: jinna@mesgroup.com.sg

Hi Raman,

Mohammed Jinna connected us. He suggested I reach out to you directly regarding automation for MES Group.

I specialize in building AI-powered systems for businesses covering lead capture, sales automation, WhatsApp integration, voice agents, and custom workflows. I've worked with 35+ companies and built 100+ automations in n8n, turning manual operations into fully automated pipelines.

I'd love to explore where MES Group could save time and scale faster whether that's automating follow-ups, qualifying leads, or streamlining internal ops.

Open to a short call this week to discuss?

Best regards,
Taha

Hi Taha,

We can arrange a concall for you to introduce your solutions.

I am available next Thursday 2pm. You can share the meeting invite.

Best Regards

Raman

Hi Raman,

It was a pleasure speaking with you two days ago and walking you through the AI integration possibilities for MES Group. I hope the demonstrations gave you a clear picture of what we can bring to the table.

Should you have any questions or need clarification on anything we covered, please don't hesitate to reach out and we're happy to assist.

Looking forward to hearing your thoughts on the next steps.

Best regards,
Taha Sheikh

Hi Raman,

Hope all is well. Following up on our conversation from last week. You mentioned you'd gather some notes and get back to me, so I wanted to check if there's anything I can clarify or any additional information that would be helpful as you review internally. |
Happy to keep things moving whenever you're ready.

Best regards,
Taha

Hi raman,

I have attached a few flows and how automation can be used. Before sending the proposal kindly review them and let us know if they are accurate or need adjustments. These are just the automation flows, they will be accompanied with dashboard too which we will be discussing in detail in the proposal

I do have a quick question: if a GIRO transaction was successful for let say a client then from the same DBS report we have to find those customers and update their status in the NetSuite as well?

We can schedule a meeting based on your convenience to discuss above. Let us know your availability.

Regards,
Taha Sheikh

To: Taha Sheikh <tahasheikh111.ts@gmail.com>

Wed, Jun 10, 2026 at 11:08 AM

Hi Taha,

While I am waiting for the User additional Report and clarifications, appreciate if you can advice on the followings:-

1. How are the data kept secure in the platform(cloud)? Is the Generative AI that you use is training and working within the platform and not with the AI provider cloud?
2. How many days of voice log and transcript can be retrieved and maintained?
3. What kind of voice recorder & transcript tool you will be using?
4. Are there any ongoing tool/cloud subscription required to run the platform?
5. What Administrative functionality would you provide?
6. What kind of support is provided post implementation?

We may have other queries before we finalise the requirements.

Best Regards

Raman

To: raman@mesgroup.com.sg

Hi Raman,

Happy to answer your questions in details:

1. Data Security

Regarding this let me discuss all layers and security in each for convenience, First comes our data storage which is at the bottom of the pyramid we will be opting for supabase (ISO 27001 certified, SOC 2 Type 2 and GDPR compliant) with Row level security (RLS) this is feature provides RLS guarantees security rules are enforced at the data layer, preventing users from modifying client-side code to bypass restrictions. Supabase is built on PostgreSQL, the industry standard for strict data integrity. Unlike NoSQL alternatives.

Second comes the hosting of the data for this we have multiple options and your convenience is preferred. If MES has its own server we can host the front-end + server-side backend on that server through SSH and secure user access. Otherwise we will request you to provide a VPS which can be bought through Hetzner(cheapest) or Azure. This Virtual Private Server will be owned by MES. Once deployed we will use PM2 and Nginx for further hosting and securing the endpoints. Other things like firewalls etc will also be enabled to make sure everything is intact.

Third comes the dashboard, The dashboard includes role-based access (CSD, RM, Management), user management, an audit log of all actions etc this along with the RLS will provide enterprise grade security.

Fourth comes the AI models, we will be using open AI with ZDR (zero data retention) enabled for agents. ZDR will make sure our data is not used by the AI platform.

fifth comes n8n for automation engine this will be self hosted on the VPS.

Sixth comes the Voice calling agent this is important firstly voice calling agent consists of three modules in which the data is circulated -> TTS, STT, and LLM now we will be using VAPI for that it provides us the architecture that connects all three. vapi provides ZDR policies for 1000\$/mo monthly fee on the top of pay as you go model (p-a-y-g is based on calls like approx. rate is 0.15\$/min). The main thing in zero data retention is the no data retention on all three TTS, STT and LLM levels but we won't have any recordings/transcripts since no data is ever retained on any level so since we need we can't opt for ZDR here.

2. Voice Logs & Transcripts

In standard plan Vapi (with no ZDR) retains voice logs and transcripts for 14 days on their platform. Recordings and transcripts will be exported and stored within our database

3. Ongoing Subscriptions

Yes, there are running costs post-launch: Azure/hetzner VPS hosting, Supabase (database), Twilio (per-call telephony), OpenAI, and Vapi (voice agent).

4. Post-Implementation Support

We provide 30 days of bug-fix support after go-live.

Let me know if you'd like to go over any of these on a call.

Best regards,
Taha

Hi Taha,

In your revised proposal, for completeness please include the followings & any other inputs you may have:-

1. Cloud hosting requirements (initially test can be your server but we will procure cloud for production migration)
2. Subscriptions plans where applicable in production environment
3. Domain & email hosting that you need from us
4. Example of AI predictive and prescriptive analytics (but it will be developed during the project duration in consultation with us)
5. Source Data files we have shared as Appendix
6. Source code, Functional Design Documents, User Manual etc. to be handed over to us at UAT.
7. Project milestone – 1) Requirement Design Document, 2) GUI Prototype, 3) Application Development, 4) Functional Testing, 5) UAT, 6) Deployment, 7) Post deployment stabilisation
8. Payment – suggest 2 tranches ie 1) upon issuance of PO & 2) sign-off of UAT
9. AMC (we don't expect this be too long)

Tks.

Best Regards

Raman
