Accounts Receivable Process Flow

Standard Operating Procedures for Billing, Monitoring, and Compliance

Prepared by: Technology & CSD Departments

System of Record: NetSuite & Banks

1. Billing

This phase establishes the operational foundation for accounts receivable through systematic payment reviews, timeline cycles, and record extraction procedures.

1.1 Monthly Billing & Statement of Account (SOA) Cycle

The monthly billing workflow adheres to a strict calendar to ensure predictable cash flow and timely notification to clients:

Timeline Milestone	Action Item & Operational Process
15th of the Month	Billing officially commences for the upcoming rental period. System checks are initiated to verify account statuses.
First SOA Issuance	The initial Statement of Account (SOA) is generated and dispatched via the NetSuite platform to all active accounts.
30th of the Month	The second structured Statement of Account (SOA) is batch-issued via NetSuite to capture mid-month changes and reminders.
Month-End Close	Full reconciliation of all extracted NetSuite records is finalized by the finance team to lock the month's ledger.

1.2 Outstanding Payment Review Protocols (Source – Giro Failed Bank Statement)

Accounts with outstanding balances must be strictly categorized and investigated based on the following metrics:

- **GIRO Enrollment Verification:** Identify and track accounts currently pending GIRO approval, ensuring all newly onboarded clients are systematically guided through setup to reduce manual collections.
- **Transaction Failure Analysis:** A Report is generated to capture failed GIRO transactions and non-enrolled accounts.

1.3 Reporting & Aging Analytics (Source – AR Report)

- AR aging reports are pulled daily from NetSuite to track shifting risk profiles.
- The 30-day bucket serves as the critical trigger mechanism for active manual interventions and formalized reminder distributions.

2. Reminders, Follow-ups, and Compliance

When balances breach standard credit terms, a gentle communication is launched to accelerate recovery while maintaining auditable transparency.

2.1 Structured Escalation Timeline

Follow-up actions scale systematically throughout the month to optimize departmental efficiency:

Timeline Milestone	Action Item & Operational Process
7th of the Month	First Official Reminder Notice is dispatched. Notifications are dynamically grouped by GIRO enrollment status and specific dormitory portfolios to tailor messaging.
Mid-Month (14th-15th)	Direct telephonic engagement. Direct follow-up phone calls are executed for all accounts carrying unreconciled or ignored outstanding balances.
3rd Week of Month	Specialized portfolio routing. Specialized billing records containing '1FM' tags are isolated via system filters and targeted with unique tracking communications.
21st of the Month	Final Reminder Notice is generated and delivered. This serves as the ultimate administrative warning before formal late fees or credit holds are applied.

2.2 Documentation & Audit Trail Standards

To protect corporate compliance and ensure institutional continuity, all communications must leave a verifiable trace:

- Every completed phone call log, email interaction, and commitment-to-pay response must be uploaded straight to the respective customer profile in NetSuite. Maintaining this centralized record is vital for internal audits and disputes.

2.3 Auxiliary Departmental Reporting & Cross-Functional Workflows

The AR team performs key supplementary reporting functions to keep secondary departments aligned:

- **Security Deposits:** Comprehensive reporting and deposit reconciliations are processed and transmitted to the Customer Services Department (CSD) every Monday without fail.
- **Late Payment Administration Fees:** On the 16th of each calendar month, specialized administrative fee assessment reports are officially compiled. These reports automatically calculate penalty parameters and dictate invoice generation rules for non-compliant business accounts, serving as a critical control for managing Days Sales Outstanding (DSO).
- **Relationship Manager (RM) Coordination:** Granular outstanding balance logs are prepared and delivered to RMs regularly, empowering them to pursue relational collection angles.
Industry Segment Analysis: Macro-categorization of outstanding liabilities organized by industry sector is calculated on the 1st working day of the month to flag structural economic risks.
